QF-Test Description: PHPMyAdmin is a web-based tool written in PHP that allows you to work with MySQL in a graphical environment. It is designed to let you work with databases easily and efficiently, and therefore it aims to provide an easy way to create and maintain databases, as well as to view, modify, delete or import them. PHPMyAdmin makes it possible to manage and use MySQL databases on your site or server, as well as to export and import MySQL database data. It comes with a great number of features including performance tools, security options, and administration tools. What PHPMyAdmin includes It provides a clean interface with a navigation menu, sections and user-friendly controls. One of its main features is the Tabbed interface that has four sections, similar to the Windows window: Navigator, PHPMyAdmin, Database and Query. The Navigator tab has a preview mode that can be used to see the details of any table or database. The remaining sections show tables, databases and information about specific tables and databases. For example, the tab "phpMyAdmin" contains the tools to manage tables, columns, users and logins, and the tab "Database" shows information about databases, their tables, columns, versions and engine. The Query tab includes a search form where you can search all tables for any text string. The new "Statements" tab will show you how to get information on all statements that have been run on a database. The "Performance" tab includes data about the overall performance of the server and its storage capacity. Managing MySQL databases It is extremely easy to create and modify databases and tables. To add tables, you need to click on the "Add" button that is next to the database name. When you click on it, the popup window shows a list of available tables. Clicking on "Create table" button will add a new table to the database, while clicking on "Table properties" will show a list of options to modify existing tables. You can access tables and their columns by simply using the "Browse" button on the table's name, and you can edit and modify the table structure by using "Properties", "Fields" and "Indexes" options. By clicking on a table's name, the table information will be shown in a pop-up window,
