The workflow in Photoshop is much improved over previous versions, particularly for working on Web. The PSD file, which is a Photoshop elemental document, is now more powerful. But unfortunately, the document doesn't take advantage of the new features. I have to admit that, the PSD documents don't seem like a fully-fledged Photoshop document anymore. The layers and Smart Objects don't work that well in the Elements features. You can't have more than 100 layers, and the file format is not as portable compared to the PSD format. This is not the largest shortcoming in Windows 10, because of cybersecurity. Even though this isn't a Windows 10 issue, I'd like to point out and I'm sure you will as well that the color palette in Elements is much more limited than it is in Photoshop. Layers are based on the document file stream. Elements will only keep the most recent version of the Element document. If you open a document from another version in a different program, you won't have access to those layers. You can recover those files, though. Updates to the photos can be large and are not easily compressed in Elements. Good update! Photoshop is snappy again and the UI loads very quickly. Controls are responsive and the update experience is excellent. A few small UI issues (-> not enough support for the crop tool), but overall very good. So far, I have found the RC version of Photoshop 2023 to run very well on my XPS training sites (both work and home). My two sites have been running Photoshop for nearly a year and they rate a 5/5 for performance.

So, now that you're ready to work in a new document, the first step is to create a new layer. You can do that by clicking the "plus" symbol at the bottom of the layer panel or by clicking the Create New Layer button we mentioned earlier. You'll notice that the panel is split into two areas -- the red tab represents the layers of your image, and the text section represents the layers of your documents. Each of the layers below the text represents your image's active layer. The layer you create represents your document, so it is the first of its kind, and you'll see the blue color. You can see which layer is active by clicking the plus symbol in the bottom of the layer panel. You can create a new document by the click File | New. The next basic feature you'll notice is the layer mode. There are six different types, and they will affect what you can do when you add a new layer. For this guide, however, we're going to be focusing on the Basics layer mode, which represents layer styles. To switch to the Basics mode, click Layer | Layer Modes: Basics.
